

Know the business you own.

An on-chain share register, AI-drafted updates a director must approve, and dividends paid to every shareholder's wallet in one transaction.

THE PROBLEM

If you own 2% of a private company, today you own a PDF.

01

No live register

A certificate and a spreadsheet reconciled by hand at every round.

02

Updates you can't trust

They arrive when the founder remembers. Data or marketing? Investors can't tell.

03

AI makes it worse

A convincing update now takes seconds. Without evidence and a signer, it's noise.

04

Slow dividends

Bank transfers, months late, one holder at a time.

Three contracts on Monad.

ShareRegister

Permissioned ERC-20 per share class. Only verified wallets hold shares. Mirrors the company's legal register: proof of ownership, not a token sale.

UpdateAnchor NEW

AI-drafted update with an evidence-confidence score. Anchored only when a director of that company approves. EOA or passkey smart-account signatures.

BatchDividend NEW

One transaction pays a stablecoin dividend pro-rata to every holder. The contract checks nobody is left out and nobody is counted twice.

HOW IT WORKS

AI proposes. A director signs. Monad records. Every holder gets paid.

COMPANY

Connects data

Stripe, Xero, GA4,
GitHub.

AI PIPELINE

Drafts

Each claim:
evidenced or
missing.
Confidence score.

ISSUER SERVICE

Records

propose(): hash,
confidence,
counts.

DIRECTOR

Signs

EIP-712, checked
via ERC-1271.
Never the
recorder.

MONAD

Anchors + pays

UpdateAnchored, then
one-tx dividend.

The AI never holds a key and never moves money. The dividend contract refuses to pay until the director's approval is on-chain.

What is backed by data, and what isn't.

Demo Startup Pty Ltd · Sep 2026 (sample, test data)

Evidence confidence **82%**

EVIDENCED Revenue A\$41,200, up 30%

EVIDENCED Gross margin 71%

EVIDENCED Two product releases shipped

MISSING LOI with a national retailer

Check it yourself

The browser hashes the update (keccak256) and calls `UpdateAnchor.verify(id, hash)` on Monad directly. No BlockID server is trusted.

Result: ✓ PASS — a director approved exactly this content.

Try it: monad.blockid.au/#update

Every holder paid, in one transaction, for under a cent.

DIVIDEND RUN	GAS	TXS	COST
20 holders · Monad testnet · measured	1.63M	1	0.171 MON ≈ \$0.004
200 holders · Monad · extrapolated	≈ 16.3M	1	≈ \$0.04
200 holders · Ethereum L1 · EVM gas	6.89M	1	≈ \$2.69 · \$170 at 10 gwei
200 holders · Merkle claims · EVM gas	≈ 22.6M	200	—

Cents, not dollars

Monthly payouts are affordable for small companies.

~350 holders per tx

30M gas per tx; 150M-gas blocks fit many companies.

Fast finality

Payout confirmed while the director is still on the screen.

A trust layer for what companies say about themselves.

Human-gated AI attestations

AI output becomes a record only after a named director signs. Four-eyes enforced on-chain: the recorder can't approve its own draft.

Passkey-ready signers

EIP-712 approvals checked through ERC-1271: P256 / WebAuthn smart accounts work with no seed phrase. Anyone can relay; nonces and deadlines stop replay.

Identity of a legal object

A verified-wallet register mirroring a real company's register, with constitution and valuation report hashes on-chain.

New on Monad, and what came before.

New (branch monad)

- ✓ UpdateAnchor.sol: director approval, EIP-712 / ERC-1271
- ✓ BatchDividend.sol: one-tx payout, completeness check
- ✓ 15 new tests (52 total) + gas benchmark
- ✓ Deploy script: propose → approve → pay → publish
- ✓ monad.blockid.au with in-browser verification
- ✓ Live on Monad testnet: deploy, director approval, one-tx dividend to 20 holders

Pre-existing foundation (disclosed)

Built in September 2026, first shown at EAG Global Buildathon Sydney on 26 Sep: share register contracts, Merkle dividend distributor, cap-table anchor, agent provenance, and the BlockID app and analysis pipeline (eth.blockid.au). Full history in the repo.

Software revenue, no token.

How we earn

- ✓ Issuance fee to set up the register
- ✓ Cap-table and reporting SaaS per company
- ✓ Transfer-agent fee per transfer
- ✓ 0.5–1% of dividend rounds paid through the platform

Honest status

- Testnet only; not an offer of securities
- No real users yet: app companies are sample listings from public information
- First market: Australian private companies (Pty Ltd), then Vietnam
- Real pilots counted separately once they sign up

TEAM & NEXT

Built in house, Sydney + Ho Chi Minh City.

Do Van Long

Co-founder & CEO. Founder, Vietnam Blockchain Corporation (2016) and Auschain Pty Ltd. Former CTO. Australia Global Talent visa.

Truong Quoc Tuan

Co-founder. Investor-side and capital-markets experience (Dragon Capital Group). Sydney.

Next 8 weeks

Passkey director sign-in in the app · shareholder feed indexed from Monad · audit · first pilot companies, then mainnet.
